Welcome to this “Lift the Flap” book! On each page, you will find lots of information about different methods of transport.

Find out more by looking under the flaps. See how the Space Shuttle works, or where your luggage is

stowed on an aeroplane. Look inside a train and find out about the various parts of a submarine.

This ferry carries people and their cars across the sea. The passengers can walk around the top deck and look at the view on the way. Other passengers prefer to visit the restaurant

or the shop. If it is a very long journey, passengers can sleep in a cabin.

The captain controls the ferry from the bridge. Its engines turn the propellers, which move the ship forwards. The rudder steers the ship.
